# WELCOME TO SOLANA UFO

We are a team of 3333 Aliens  
bringing out new solutions from  
another universe!

# UNIQUE AVATARS

- We've become tired of countless copycat derivative projects on Solana. They damage the public image of the chain and make it feel cheap.
- We've decided to come forward with a hand-designed project everyone will feel comfortable using as a part of their Web3 identity.

# \$UFO TOKEN

- We are going to release a \$UFO Token which will be airdropped to our NFT holders.
- The token can be also earned from staking the NFTs and the holders will benefit from fee reductions on our upcoming DEX.
- The token will be deflationary which will be ensured by periodical burns.

# USER-FRIENDLY DEX

- We're planning to create the most user-friendly decentralised exchange for tokens. We've seen many projects which work just fine. However, there's a major problem with each of these. They are just too complicated for newbies to use.
- We'd like to change that and create the most fool proof DEX possible. This is what crypto should be about after all.

# OUR LAUNCHPAD

Additionally, our DEX will offer a launchpad for new coins and tokens. All new projects will be able to use our tools and help when starting out.

# MOBILE APP

- Our long-term plan is to develop a UFOSwap mobile app where customers will be able to swap cryptocurrencies and tokens on Solana and even different chains with no KYC or any centralised authority having access to their funds.
- While the fee will be minimal, our NFT holders will be able to have their fees reduced even more.
- Everything behind the app will be open-source in order to maintain full transparency.
